FAQ

Q: The machine beeps once every 3 seconds

A: The machine is not completely covered with water

Q: The machine beeps short

A: The power is low and needs to be charged

Q: The machine beeps long

A: The machine is not turned off when charging

Q: The machine travels very slowly or the cleaning effect is weakened

A: The filter is clogged with too much garbage

Q: The machine into the water does not move, how to solve?

A:

Step 1: First determine if it is booting properly, attached the video

PC03 - 开机声音.mp4

Step 2: If it is normal to turn on the machine, then check whether the filter is blocked, some pools are large and dirty, then the machine may operate for a while after the wave is full of suction, so it can not move. (You can ask the customer to take out the filter, the machine into the water, to see whether the normal operation. If it runs normally, then the filter is blocked. If it still doesn't work properly, that's not the reason.)

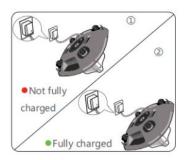

Step 3: The machine is immersed in the pool for a long time and does not work, you need to check whether the water detection needle is covered by scale, please first wipe the water detection needle. After cleaning, the machine works normally.

Step 4: If none of the above problems are present, may be out of battery. There are also two reasons for running out of battery:

Reason one: running out of battery:

Observe the indicator on the charger:

- ①Red indicates the device is not fully charged;
- ②Green indicates the device is fully charged;

Reason two: the battery is not properly maintained and has decayed

How to maintain the machine when not in use?

During the off-season period, charge the device once a month to protect its abattery
